

Ion Exchange Media & Active Carbon ...

Aqua (Scotland) Ltd can supply all media for all water treatment requirements. We can supply from one litre upwards with no limit on maximum quantities.

Our Media have been used for a variety of purposes as diverse as the following:

- High Purity Water Production
- Water Polishing
- ION Exchange
- Carbon filtration / Activated carbon
- Base Exchange Softening
- De-alkalisation
- Nitrate Removal
- Organic Scavenging
- Demineralisation
- Window cleaning systems
- Car wash systems
- Ice Skating Rinks
- Ice Sculpture Production
- Removal of radioactivity in effluent waters
- Reduction of Oxygen from boiler and reactor water
- Oxygen Scavenging
- Bentonite Production

Aqua (Scotland) Ltd can supply for all of the above purposes and more; please call for your specific requirement and quantities

Aqua (Scotland) Ltd has the facility to renew (not regenerate) your spent vessels and refresh the media content. We can arrange collection of the vessel from your facility and return to you in a timescale that suits your production demands. No need to wait or plan for the next weekly collection. All our vessels are filled with virgin media, which will exceed your current use periods, typical improvements of a polishing vessel have gone from 4-6weeks to be in excess of 10weeks installed and in use.

Aqua (Scotland) Ltd assembles, fills and tests new media cylinders at our facility in Livingston to suit your size and flow specification, our prices are considerably cheaper than the UK's main suppliers and can be built at short notice usually from stock.

Aqua (Scotland) Ltd can supply short-term rental cylinders in the event of major plant failure to keep your process up and running.

Aqua (Scotland) Ltd can supply all the media requirements for the pole window cleaning systems and have modified systems for cleaning companies to remove the requirement to buy expensive disposable cartridges.
