

## Water System Maintenance:

To ensure a quality end product your facility requires quality maintenance and consumables.

From an initial site visit we are able to advise you on what your obligations are under health and safety law and design a program of compliance that meets your budget.

As a customer of **Aqua (Scotland) Ltd** you will be provided with a detailed log book of your facility and the program of scheduled works required, we additionally advise you upon non compliance and areas of risk within your water system.

**Aqua (Scotland) Ltd** can clean and disinfect or clean and chlorinate your water storage tanks, pipework, outlets and showers as or if required by the findings of a risk assessment and water sampling. Temperature checks on the hot and cold water systems, as a basic maintenance program, will give early indication of a balanced system or a system with risk.

At **Aqua (Scotland) Ltd** we can assist you in the design of a maintenance program, which will maximise your operation and minimise the risk to personnel.

**Aqua (Scotland) Ltd** can provide for your entire filter and consumable needs and with our ION exchange program operating in the central belt of Scotland we can reduce the cost of shipping and time off site. All your vessels are regenerated with first class materials at a very competitive rate.

**Aqua (Scotland) Ltd** can advise on and maintain your Reverse Osmosis, Deionised (DI) and Demineralised (Demin) water systems, we can design a program for membrane changes or regeneration and incorporate the change of your UV Lamp and maintenance of your UV Sterilisation system. We will provide you with the paper trail for duty of care with the disposal of all redundant and expired components.
