

Aqua (Scotland) Ltd – Neptune Water Systems

This is entry level five stage domestic / light commercial water filter system.

The package includes:

2 levels of Sediment filtration – for removal of particulate and suspended solids

2 levels of Carbon filtration – for removal of chlorine and ammonia as added by your water authority

Reverse Osmosis Membrane – for removal of lead, bacteria and calcium etc

Water storage tank

Outlet faucet (Tap) to mount onto sink / work surface

Pipe Clips and tubing etc

Additional items that can be added to this package are:

UV- Lamp – Used to kill bacteria

Booster pump – for use in low-pressure supplies

3-year filter replacement kit

Aqua (Scotland) Ltd also manufacture bespoke systems for use in remote locations, spring / borehole fed and rain water collection systems. These units are built from parts specific to requirements and use much larger capacity pipework and components to allow domestic level capacities and flow rates.

We can tailor a system to meet your requirements as a one off or in bulk, contact us to discuss your needs.
